Problem – Solution Fit Overview:

The Problem-Solution Fit ensures that the identified problem aligns with the needs of users and that the proposed solution effectively addresses it. This concept helps developers, marketers, and business strategists validate the necessity and effectiveness of their solution before further development.

Purpose:

- Address the lack of efficient application for storing and searching the contacts on the laptop or desktop
- Provide a way to see and update the contacts on the go while working on the laptop
- Improve the accessibility to the saved contacts and a search functionality

Problem Statement:
People struggle to effectively manage and maintain their growing professional and personal networks because existing solutions are either too complex, too expensive, or lack the simplicity needed for quick contact organization and retrieval.

Solution :

- A Node . js based backend to perform CRUD operations on the contacts
- Categorization, filtering, and search functionalities improve accessibility and user engagement.
- Integration with the mongo_db for storing the data of the users and contacts and performing the CRUD operations
- JWT based user authentication
